Aantal medewerkers: 25

Aantal IT medewerkers: 15

Aantal technische begeleiders: 12

Afstudeerrichting: Software Management

Opdracht

Cubigo's cloud-based solution enhances independent living for seniors. Its unique technology for staff, residents, and family to communicate on one platform enables streamlined access to services such as meals, activities, maintenance and transportation. It puts control in the consumer's hands and for our clients, lowers their total cost to serve.

Succeeding with continuous delivery requires more than the right infrastructure. We

want to get changes out frequently as well as recover from problems quickly. To do this with confidence, we need feedback to learn about the impact of our changes. We already have a product mindset, DevOps culture and Quality Assurance process in place, yet we want to evolve in this.

The goal of your assignment will be a complete analysis of the Cubigo Product processes regarding continuous delivery in a scale-up environment (SAFe inspired). Next to this we want you to outline gaps/risks/optimizations (automation) and execute hands-on experiments/practices to improve certain steps. Lastly we would love you to help us create a dashboard to follow-up on team & product performance.

Extra Info

Aha!, Sketch, Invision, Azure Devops, App Center, Azure (multi-region), Jenkins, Fastlane, Power BI, Test Automation Framework (Protractor, Jasmine, Frisby, Appium) and Confluence.

Extra Info

PostgreSQL, .Net 4.6, .Net Core, Angular 7/10, Azure Devops

Omgeving

Software testing, ITIL, Projectmanagement, CRM, Information Management

Randvoorwaarden

Onderzoeksthema

possible research topics:

- Product mngt / roadmapping tools comparison
- Team performance dashboards (KPI – functional / technical / infra)
- CI/CD tools comparison
- TestAutomation tools/tech comparison - Frontend: web / iOS

Inleidende Activiteiten: Sollicitatiegesprek, CV
